5   **ABSTRACT OF THE DISCLOSURE**

        The present invention is directed to a system and

method for comprehensively generating summaries of digital

videos at various lengths and in different formats. In one

aspect, the system analyzes closed-caption test to find

10   summary sentence(s) for each story in the video, which are

ordered in terms of their selection order. Upon selecting a

presentation format, a set of images, video clips or an

already-prepared video summary for each story is found.

Text-to-speech tools can then be used to audit the summary

15   sentences or capture the audio clips from the video with

respect to the summary sentences.
